

HYPER

ANALOG ATTITUDE PROCESSOR

Give the record presence.

Body, edge, density and transient movement in one hands-on processor. Shape the attitude, blend it into the music and compare at equal loudness.

A new light on familiar controls.

Brushed graphite. Scalloped vintage knobs. Glass buttons. Two internally illuminated VU-style displays that follow the colour of your theme.

HYPER interface: purple theme.

Build the vibe in layers.

Start with the smallest useful move. Turn up the attitude when the music asks for it.

BODY + EDGE

Weight and Heat bring foundation and warmth. Bite and Air add definition. Tone and Density help place the texture.

POLISH / PUSH / WRECK

Three intensity ranges around the central HYPE control, from understated refinement to bold parallel saturation.

TUBE / TAPE / TRANSFORMER

Three digital colour models, with rounded, smooth or asymmetric shaping.

IMPACT + CHARACTER

Soften attacks or bring them forward. Move Character from open, envelope-shaped behaviour towards darker vintage texture.

COMPARE WITH CONFIDENCE

Gain Match, linked Input/Output, Delta, Bypass and A/B/C memories put the decision back in your ears.

Your sound. Your atmosphere.

Four coordinated themes, selected with a click on the Shark logo.

AMBER

PURPLE

RED

BLUE

Light from within

Soft pools of light sit beneath readable meter scales. Recessed shadows and a quiet glass reflection complete the analog feel. Theme colour changes the visuals only.

106 factory starting points

Mastering, Mix Bus, Professional and instrument categories, plus INIT. Mark favourites, exchange user presets and keep three comparison settings ready.
