

SHARK PLUGS / VINTAGE

CASSETTE-INSPIRED AUDIO COLOR

Warmth. Weight. Movement.

SHARK CASSETTE brings the feel of a vintage cassette deck to your tracks: rounded peaks, textured harmonics and just enough instability to make a sound move.

THREE TAPE CHARACTERS. ONE HANDS-ON DECK.

Choose Normal, Chrome or Metal. Push Drive for density, shape the top end with Tone, and blend the result with Mix. Add Wow, Flutter and optional Hiss when the track wants a little age.

Illuminated VU meters. A glowing tape window. Brushed-metal controls.
A vintage look with session recall and modern parameter control.

THE SOUND & THE WORKFLOW

Make it your tape.

From a little warmth to worn-in texture

Keep Drive low for gentle color, or push it for denser harmonics and rounded transients. Use Mix to bring the original signal back into the sound.

Choose your cassette character

Normal offers a darker response and lower headroom. Chrome gives a balanced voice. Metal keeps more headroom and a more open top end.

Dial in movement

Wow adds slow pitch motion; Flutter adds faster instability. Hiss has its own level control and a separate Noise switch, so texture stays optional.

Compare before you commit

Auto Gain helps compare RMS levels. A/B/C snapshots, undo/redo and 42 factory presets make it easy to explore and return to an earlier sound.

A deck that fits your session

Save your own presets, recall settings with the session, automate parameters and resize the interface. The saturation stage uses fixed 4x oversampling.
