

SHARK CLIP

Single and multiband clipping

Punch. Density. Control.

Bring peaks into shape. Add body where the music needs it. Move from a familiar full-band clipper to three independently driven bands in the same instrument.

60 presets / Four themes / Tactile metal controls

Control the whole picture.

One signal. Four characters.

Choose Modern, Classic, Hard or Soft Pro. Push the input, tune the knee and add Density for more body relative to the peaks. HF Smooth and parallel blending help place the result.

Three bands. More direction.

Open Transfer and enable Multiband. Low, mid and high drive give you three broad regions of control, with individual softness, solos and illuminated transfer displays.

Blend your point of view.

Dry. Single. Multi.

Combine the clipping-stage dry reference, the single-band path and multiband processing with three normalized blend weights. Keep the outer Wet/Dry faders for a second layer of parallel control.

Hear the decision.

Gain Match, Delta and A/B/C make comparison part of the process. Choose oversampling for your session and export. The right-side menu keeps zoom, manual and About close at hand.

Orange, Blue, Green and Purple themes share the same tactile controls. Low, mid and high retain their band colors so the display stays easy to follow.

Find your starting point.

60 factory presets

30 original mastering, bus, drum, bass, vocal, key, guitar, creative and utility presets. Plus 30 new Artist Inspired multiband recipes.

Daft Punk / Billie Eilish / The Weeknd
Kendrick Lamar / Radiohead / Skrillex

Shark-created interpretations of musical textures. Artist names identify inspiration; they are not artist settings or endorsements. Adjust each recipe to your source.

Explore SHARK CLIP

Explore the complete manual and product page for controls, practical workflows and download availability. The current edition is in development; customer installer and verified platform details will be announced there.
